

TERMINAL

Next-Generation Intelligent
Investment Platform

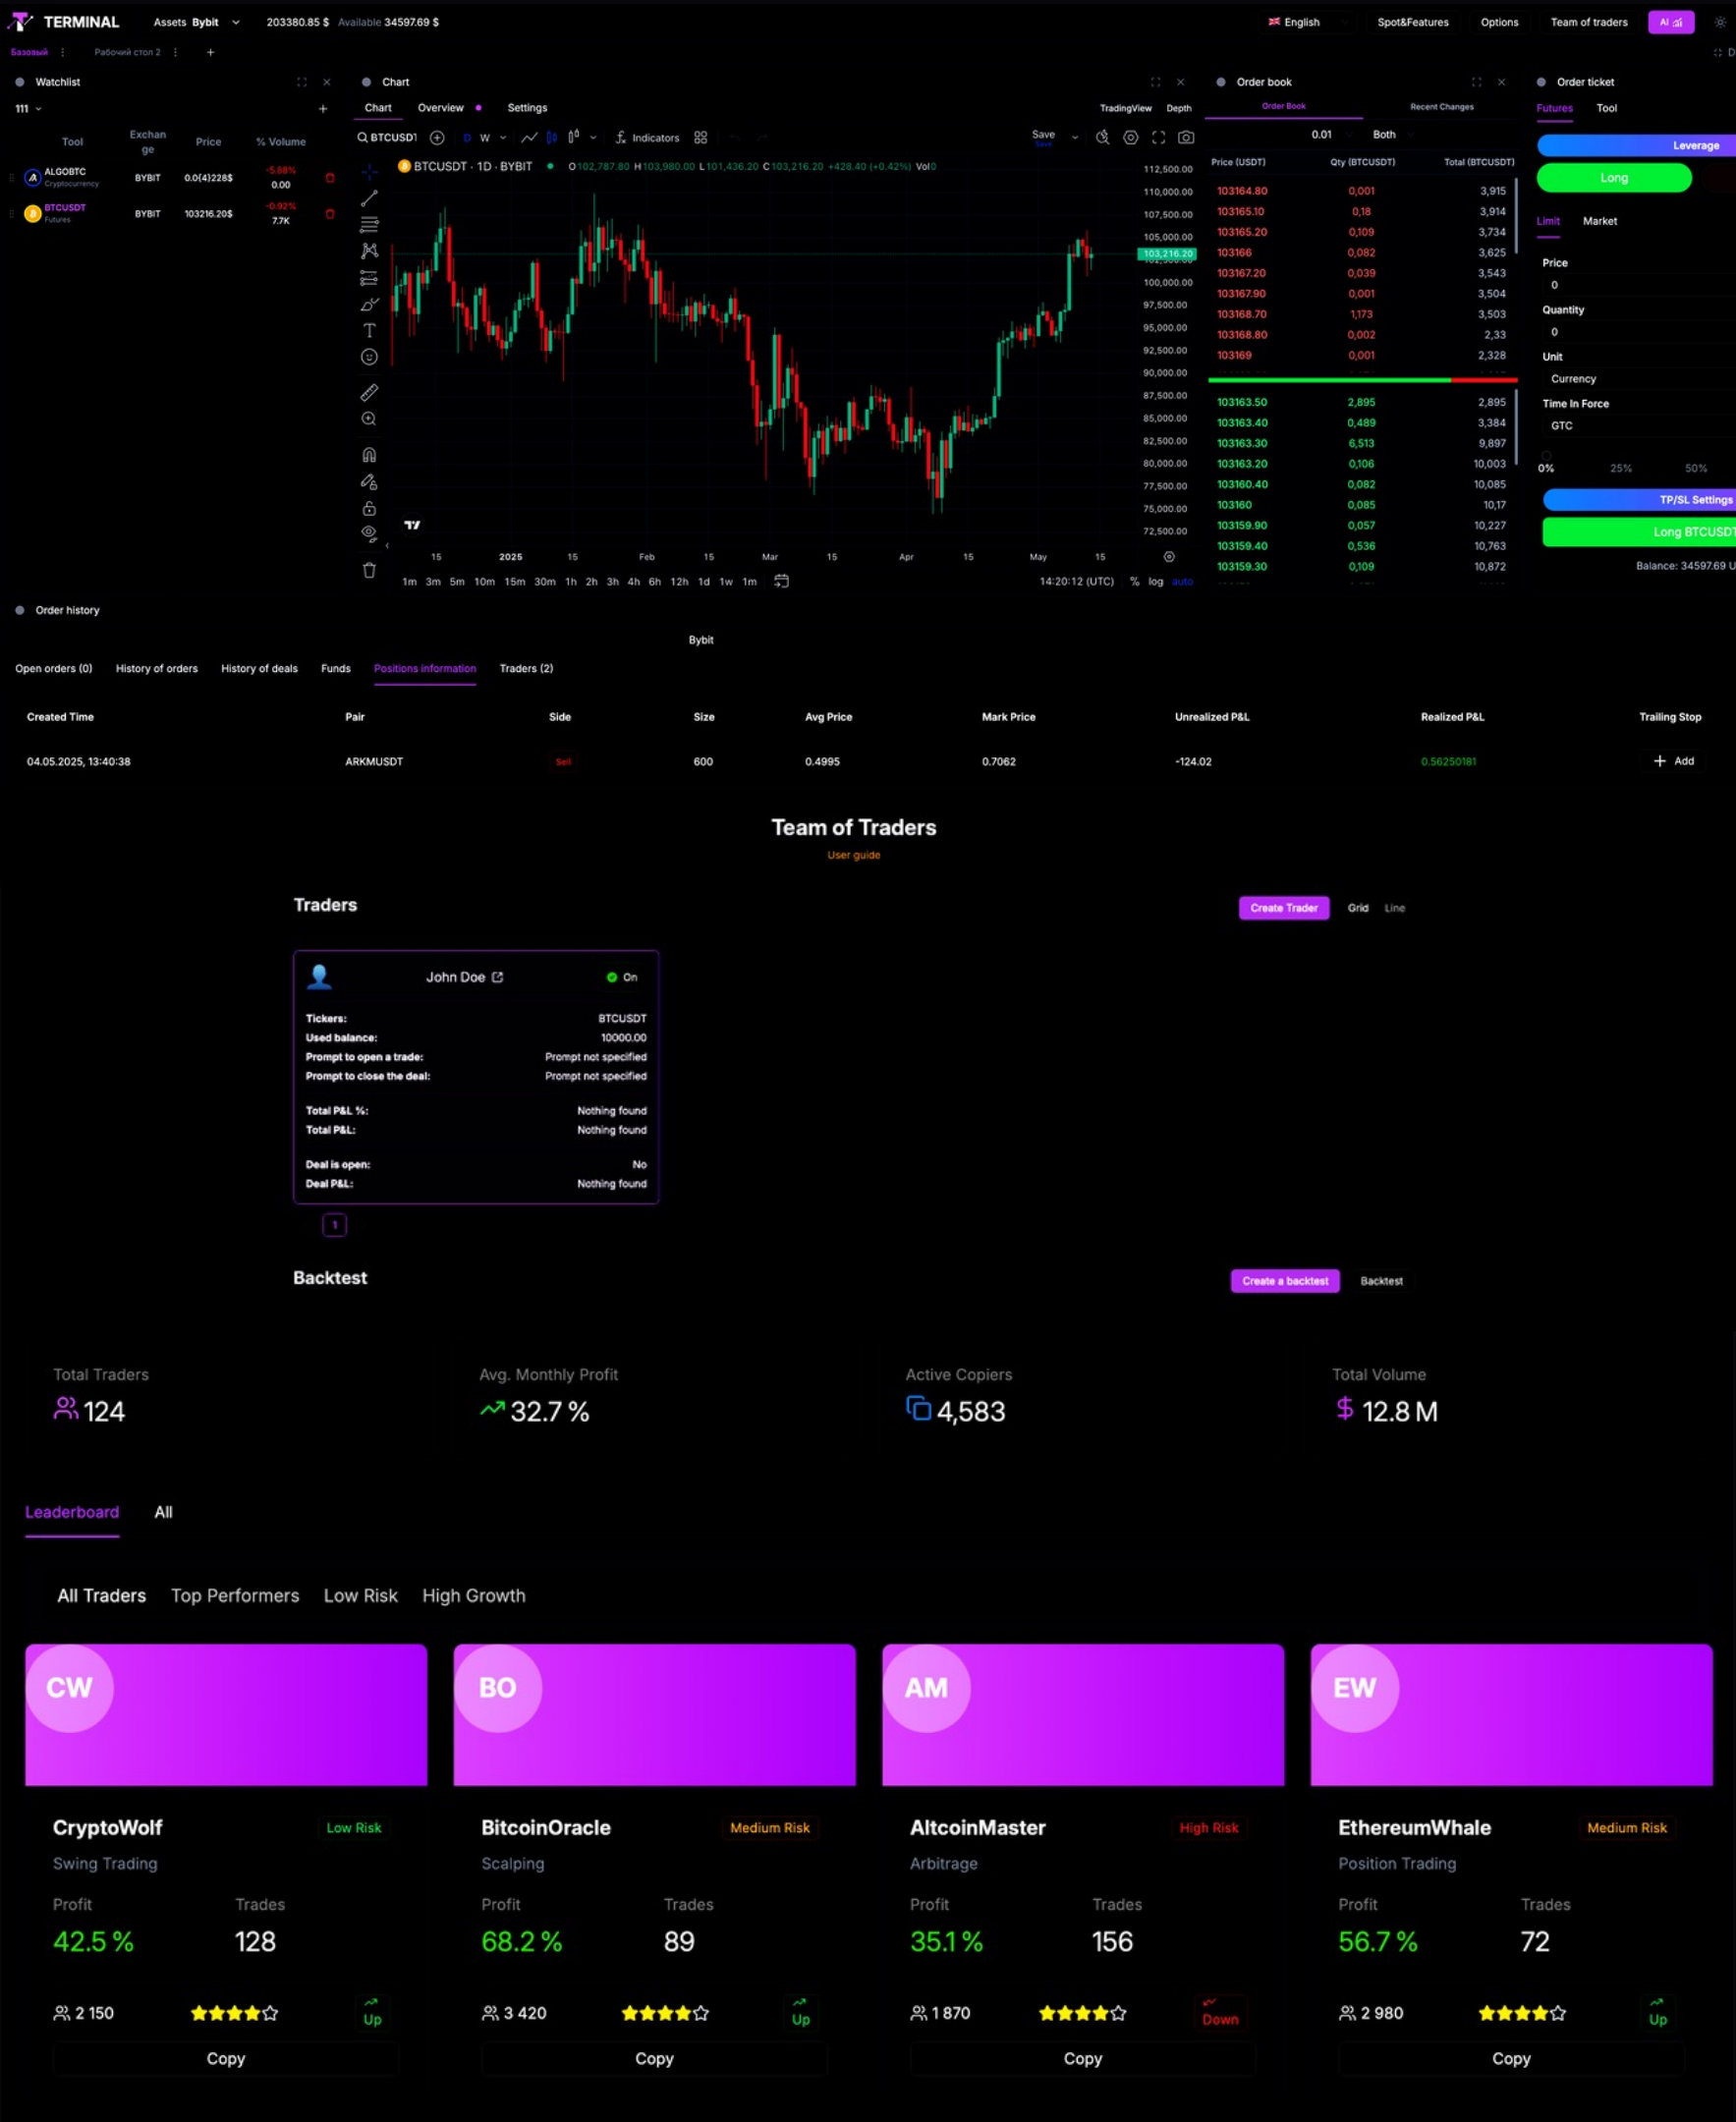

What is a TERMINAL?

A modern trading platform integrating a comprehensive set of technical analysis tools, advanced market movement forecasting systems, automation, and artificial intelligence technologies.

AI - Traders are customized with text to fit individual strategies and operate fully automatically: from data collection and analysis to forecasting and decision-making.

OPPORTUNITIES

You define or choose the strategy – AI traders do everything themselves.

Stock Market

Derivatives

Cryptocurrencies

- Create a team of traders with different specializations
- Copy the best strategies
- Set individual goals, styles, risk tolerances, and analysis methods for each
- Test and achieve systematic results, enhanced by team logic and the maximum possible volume of knowledge
- Combine automation, AI, and strategic thinking in one place

Who is it for?

1

Beginners: Copying trades of the best AI traders and earning passive income without trading experience

2

Professionals: Creating and scaling strategies, managing autonomous AI traders

3

Leaders: Earning through subscriptions to proprietary strategies with thousands of followers

4

Institutional Investors: Investment funds, exchanges, and banks – obtaining forecasts built on vast data volumes and multi-level analysis

PROBLEM

- Private investors lose money due to a lack of knowledge, discipline, and analytics.
- The market is oversaturated with complex tools without automation.
- There are many platforms, but no unified intelligent ecosystem.

SOLUTION

- Automated AI-based platform
- Ready-made AI trader strategies → passive income
- Creation and customization of your own AI teams
- Full transparency, control, and customization
- Infrastructure for Enterprise clients

TRUST

- Validation sample of time periods for predictive AI models
- Smart DB that records all actions and operations of AI traders in real time

Create and lead

- Develop your own strategies with analytics and AI support
- Create an AI team of traders for different market tasks
- Become a top trader with a subscription-based earning model

Auto-following for passive income

- Choose a successful AI strategy – trades are copied automatically with confirmation
- Fully transparent statistics backed by a public ledger
- Hedging and flexible risk management

Result: Passive income with minimal knowledge and maximum security

UNIQUENESS

This is not just a team of advisors or bots – it's a multi-level, structured AI Team, where each member:

- Fulfills its function – from time series analysis and option delta evaluation to scalping and positional trades.
- Possesses unique behavioral parameters.
- Exchanges information.
- Operates in any market – cryptocurrencies, stocks, etc.
- Utilizes all available instruments – spot, futures, options.

HOW IT WORKS

Connect in 2 minutes via API

Choose an AI strategy or create your own

Real-time control of risks and profitability

Automatic trade copying or autonomous trading

ARCHITECTURE

AI

Traders:

- Configured with text prompts (Prompt Engineering)
- Operate on timers, triggers, or in real time
- Support machine learning and technical analysis rules
- Possess memory and decision-making history

Automation

- Pattern, signal, and level detection
- Asset movement forecasting
- Automated actions based on strategy (via API/linked exchanges)

Manual

Analysis:

- Powerful graphical interface
- Support for levels, trends, indicators, and annotations
- Interactive mode with AI

Result:

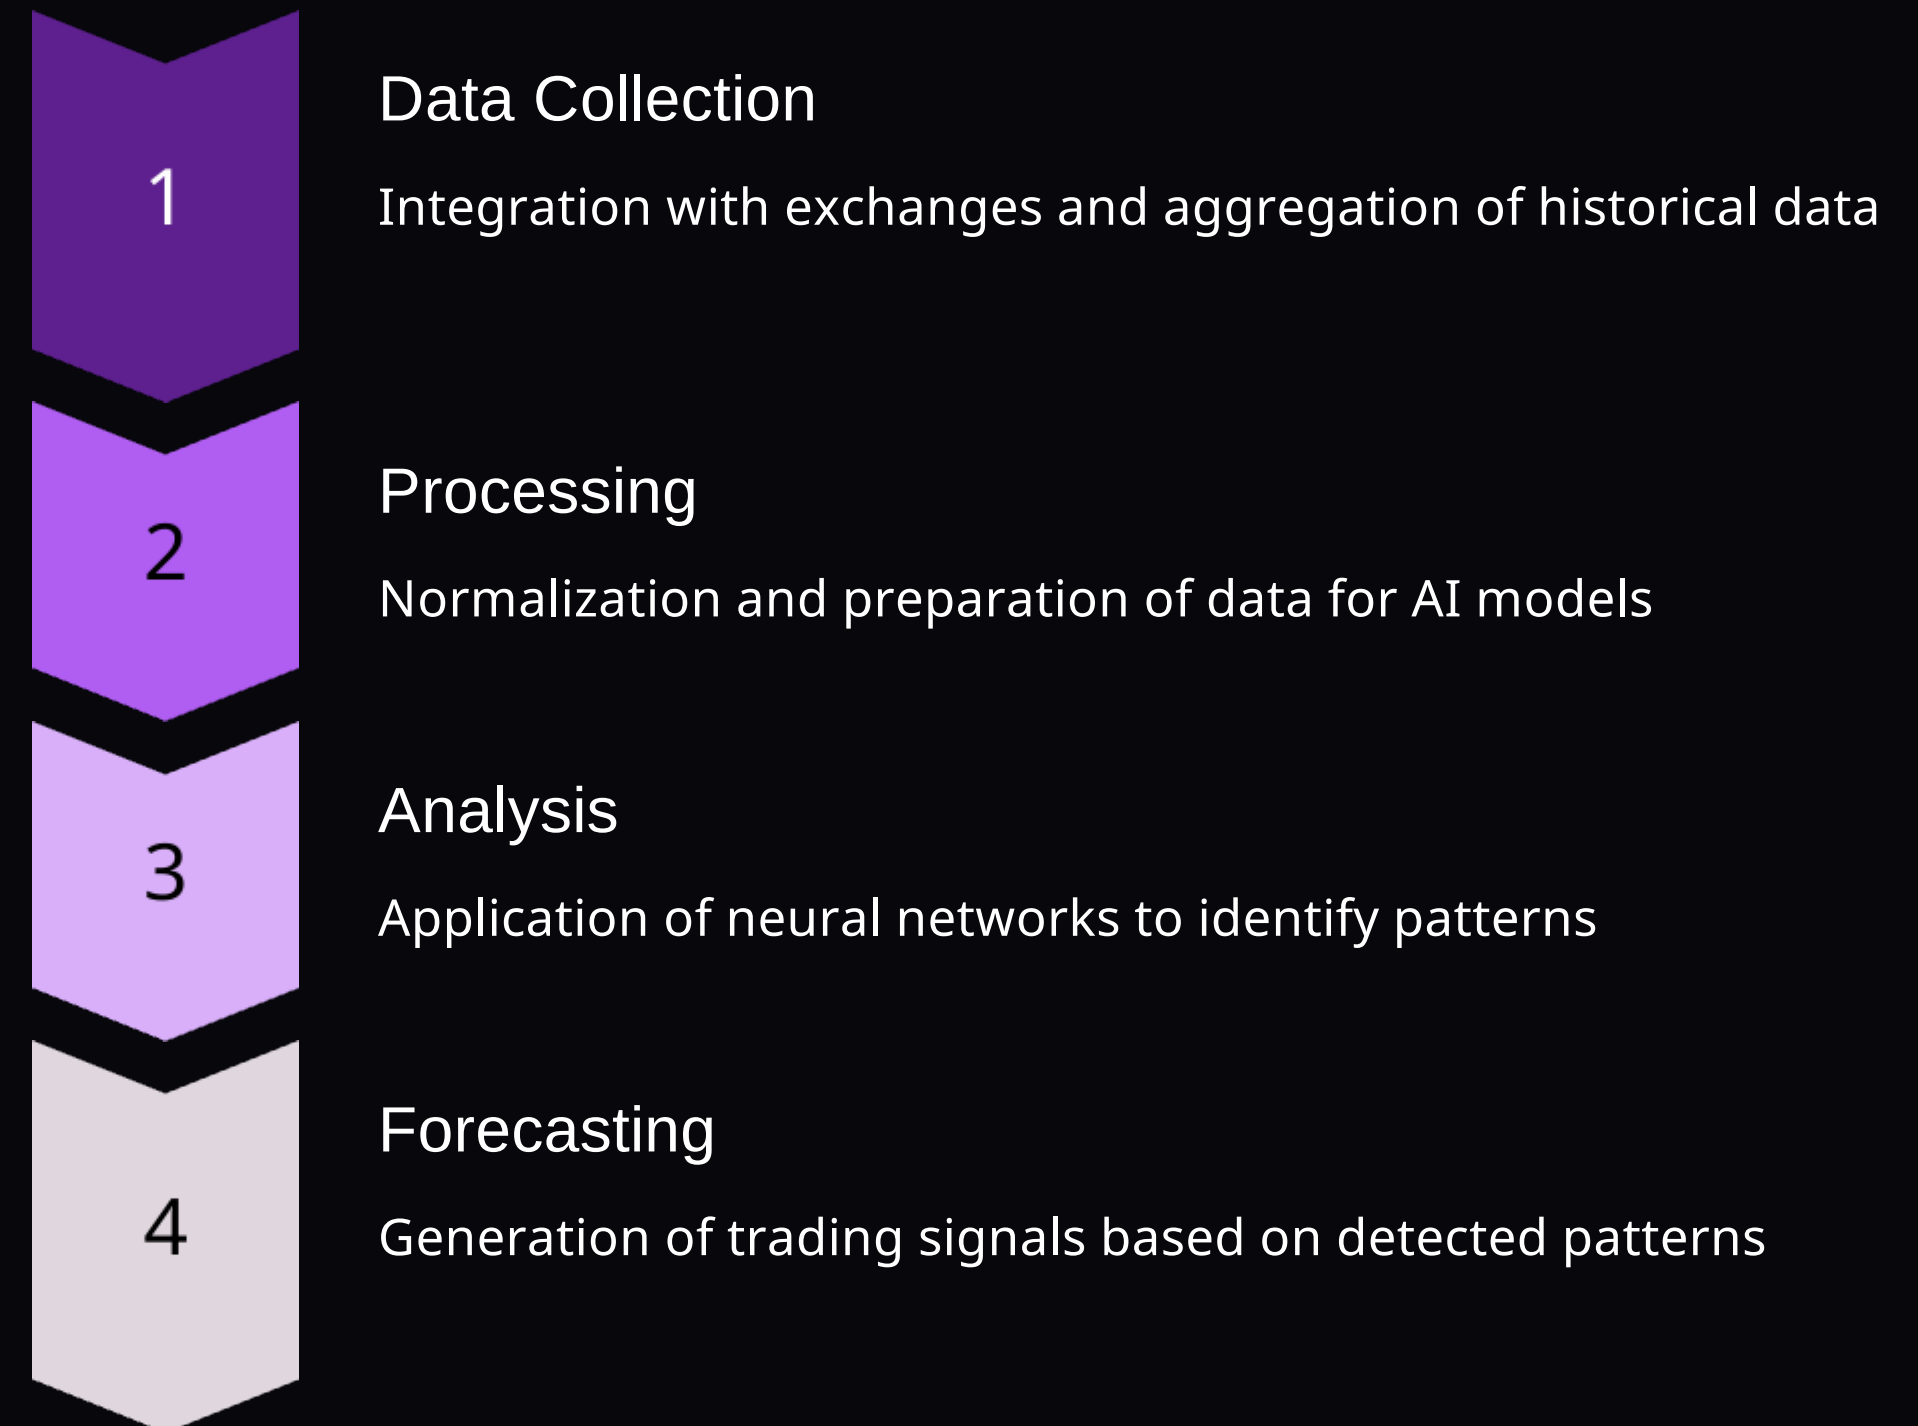

- The entire team works to grow your capital
- The system learns, adapts, and optimizes
- Management is done at the strategy level, not at the operational level

Versatility

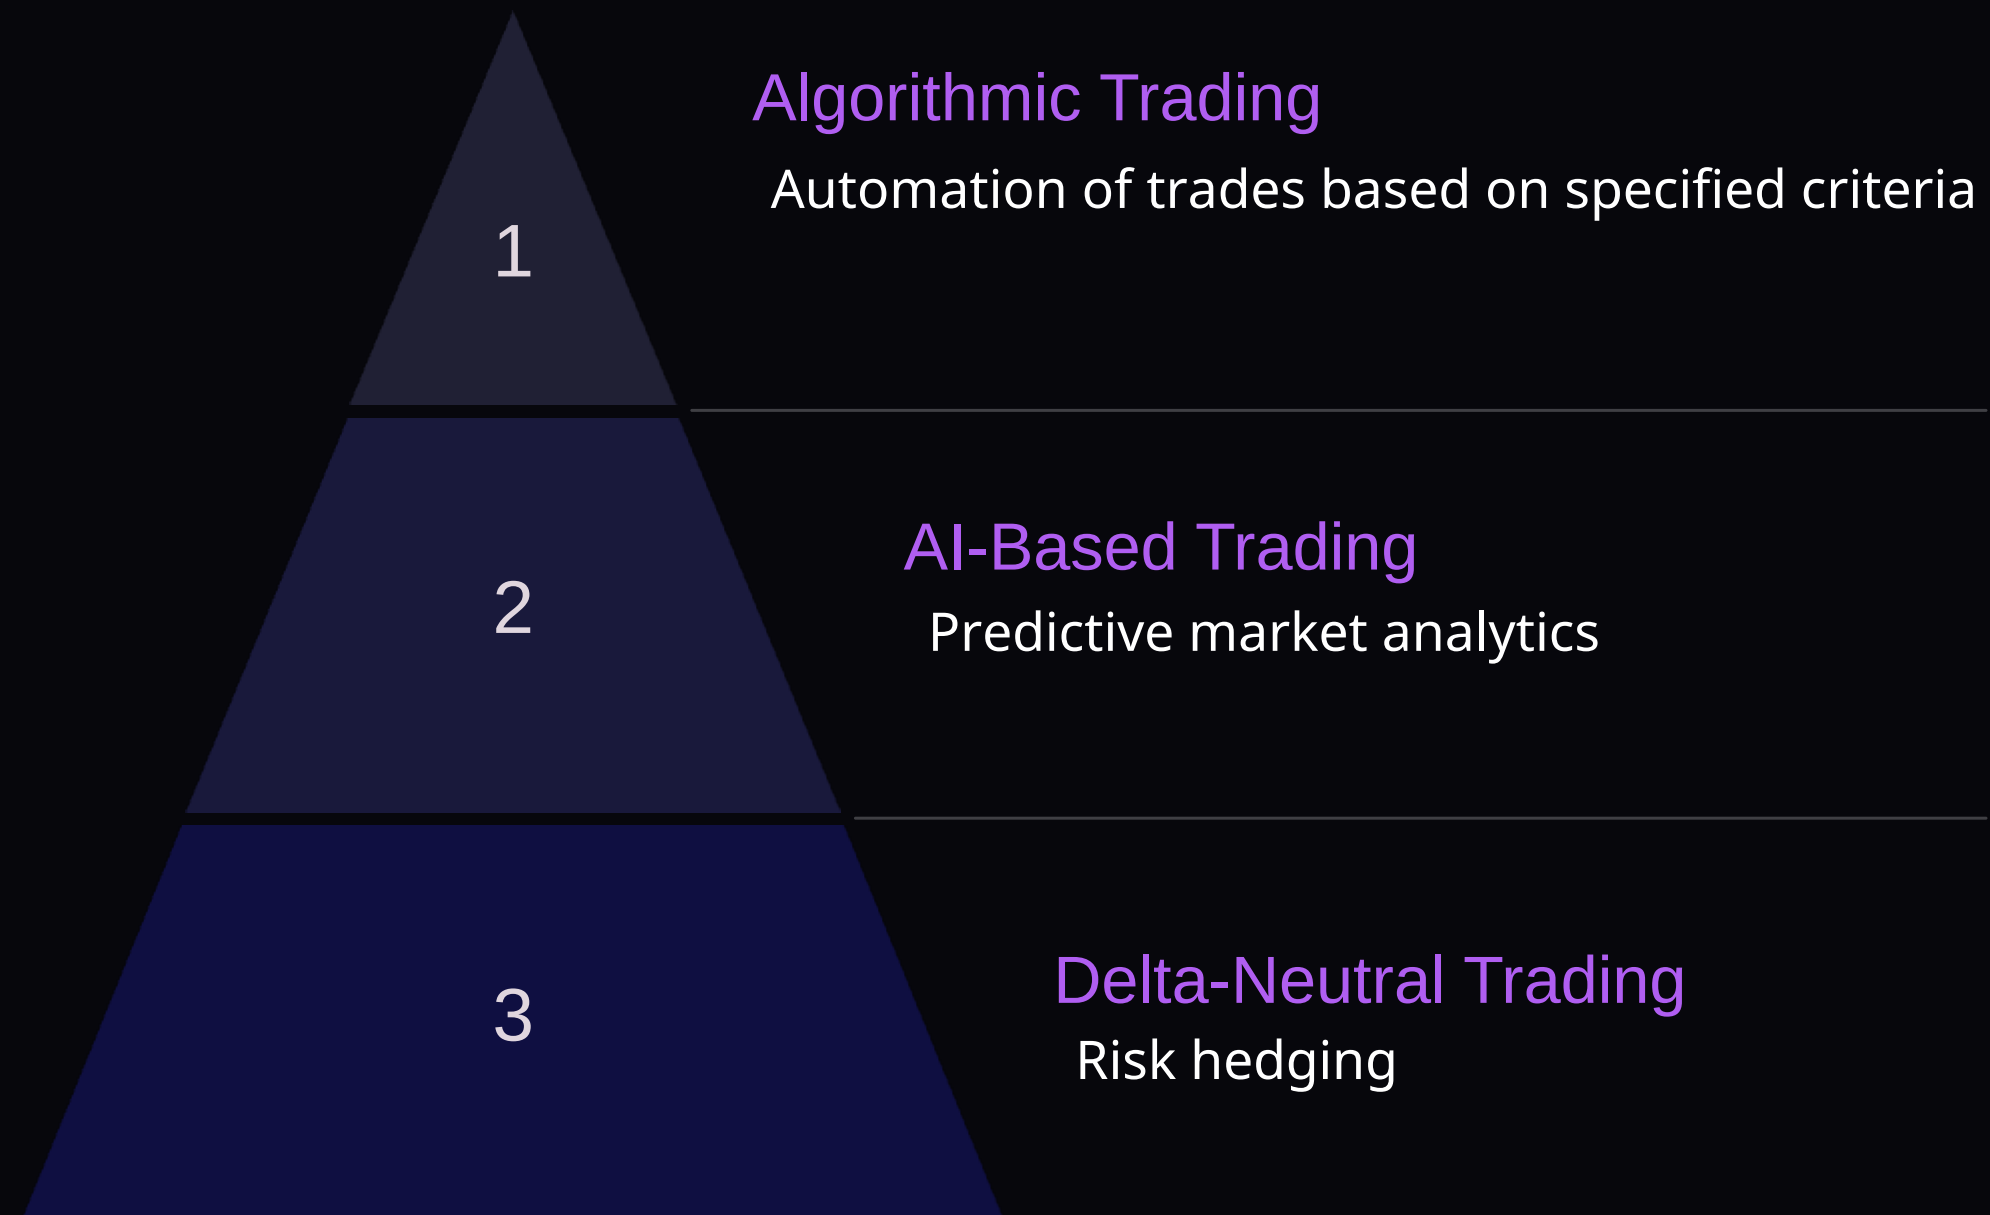

- Crypto, stocks, futures, options
- Supports various data providers and brokers
- Modular extensions and scenario-based strategies

TIME SERIES ANALYSIS BASED ON AI MODELS

INNOVATIONS

The terminal integrates a suite of artificial intelligence models and the most popular technical analysis tools.

Strategies used by the largest investment funds have been implemented.

TERMINAL ADVANTAGES

Technical Expertise

We apply cutting-edge technologies and tools in platform development

Intuitive Interface

Quick start and user-friendly experience for all skill levels

Scientific Approach

Collaboration with leading experts in artificial intelligence

Data Security

Reliable information protection and compliance with cybersecurity standards

TECHNOLOGY STACK

BACKEND

JavaScript/TypeScript, Node.js, NestJS, Python, FastAPI
High performance and scalability

DATABASE

PostgreSQL - Reliable storage and fast data access

1

2

3

4

FRONTEND

JavaScript/TypeScript, React, React Native.
Responsive and intuitive interface

ARTIFICIAL INTELLIGENCE

PyTorch, TensorFlow, Keras, AutoKeras, AutoML.
Advanced forecasting algorithms

CONTACTS
